Feedback

Approval Comment

The CSU IRB (FWA0000647) has completed its review of the above-referenced protocol. In accordance with federal and state requirements, and policies established by the CSU IRB, the designated reviewer has determined your project is exempt under 45CFR46.104(d). Although this research is considered exempt, CSU expects that researchers continue to follow moral and ethical obligations of research conduct, by honoring the principles in the Belmont Report.

(2) Research that only includes interactions involving educational tests (cognitive, diagnostic, aptitude, achievement), survey procedures, interview procedures, or observation of public behavior (including visual or auditory recording) if at least one of the following criteria is met:

(ii) Any disclosure of the human subjects' responses outside the research would not reasonably place the subjects at risk of criminal or civil liability or be damaging to the subjects' financial standing, employability, educational advancement, or reputation;

Although this research is considered exempt, CSU expects that researchers continue to follow moral and ethical obligations of research conduct, by honoring the principles in the Belmont Report.

Please note, any changes to the proposed research should be reported to the IRB via an amendment prior to implementation.

Thank you,

CSU_IRB@colostate.edu

General Information

Principal Investigator -- search by name, CSU eID, or email address

Please note that Personnel and Department lists include information across the entire CSU System (excluding students). If you cannot find your name or department or need students to access your protocols, please submit a ticket using the VPR Service Desk.

General Questionnaire

Application Type

Exempt

Does this study include use of existing data?

No

Does this study include the use of biospecimens (e.g. human blood, cells, tissues or body fluids)?

No

Will this project utilize a Data Use Agreement (DUA) or a Material Transfer Agreement (MTA)?

No

Does this study involve the use of any FDA-regulated products, drugs, or devices (approved or not)?

No

Is this a clinical trial required to be posted on ClinicalTrials.gov? Clinical trial decision guides are available from NIH.

No

Does this study include the use of Patient Medical Records/Protected Health Information? More information about Protected Health Information (PHI)

No

Does this study include the use of student educational records, student data, and/or research

on educational strategies or practices?

No

Does this project involve Community-Based Participatory Research (CBPR)?

No

Is this study a Graduate Level Thesis or Dissertation Project?

No

Is the project funded?

No

Does this project involve children?

No

Study Participants

Does your recruitment plan include specifically targeting any of the following groups?

Select all that apply by clicking "Add Line" and choosing an option from the dropdown, creating as many lines as needed.

Participants Dropdown

Adults

Collaborators

Does this project involve collaboration with any other institutions or community partners?

No

Summary

Provide a one-paragraph description of the project in lay language, including the specific research question.

We, this refers to Dr. Sood and me, want to know what type of politicians people remember. What do people think about when they think about "the Democratic party" or "the Republican party"? What characteristics (extremity, age, gender, race, office) do these politicians share? In order to answer this question, we are using a survey experiment on a convenience sample provided by the survey company Cint. We ask people who they think about when they think about political parties and what issues they think about when they think about these parties. Dr. Sood and I are the only researchers involved in this project. Dr. Sood does not have an academic affiliation. Throughout this application, "I" refers to Dr. Daniel Weitzel and "we" refers to the research team of Dr. Sood and Dr. Daniel Weitzel

Proposed End Date

February 1, 2024

Background

Provide a brief overview of the relevant background. Discuss the present knowledge, appropriate literature and rationale for conducting the research.

Political science has a long-standing research tradition that examines the origins of party attachment (family socialization, the socializing role of the first election a person votes in, and key events such as scandals or Supreme Court decisions). The discipline also has a long-standing tradition of examining socio-demographic factors (education, age, cohort, gender, rural/urban, state) on party identification. More recently, a large amount of research has focused on the change in the type of partisanship that is present in the US. The new type of partisanship is called affective polarization, where parties are seen not like the provider of policies but more like sports teams and people develop emotional attachments for or against parties. In this project, Dr. Sood and I, want to go beyond this research and examine what people think about when they think about political parties. When someone thinks about the Democratic or the

Republican party, what are the individuals or policies they think about? Dr. Sood and I, want to learn who the parties in the heads of people are and by doing that hopefully get a better understanding of how people think about politics. For example, is the image people have about the Republican party a long-running average of policies the party has implemented or do people think of a party as the key individuals in that party?

Please describe the expertise you have, or have access to, which prepares you to conduct research in this location and/or with this subject population, including specific qualifications (e.g., relevant coursework, background, experience, and training).

I, Daniel Weitzel, have a PhD in Political Science, study political behavior, have published on political behavior, and also hold a MSc in Statistics. These experiences prepare me for implementing a well-designed research study and analyzing it correctly. Dr. Sood is an independent researcher that works for a machine learning/data science company. He holds a PhD in political science from Stanford and still does political science research in his spare time. He has published extensively on political behavior in the United States. His research track record can be seen here: https://gsood.com/research/

Explain your knowledge of local community attitudes and cultural norms and cultural sensitivities necessary to carry out the research.

I live, research, and teach in the US. I am familiar with the political landscape and have consulted with other researchers in the field about the research design. Dr. Sood also lives in the United States and, while not an academic, is a prolific researcher with an extensive publication record in political science on topics related to American political behavior.

Procedures

List all research activity procedures in which a participant will be involved, including follow-up procedures. Each procedure can be added by clicking "Add Line." Add as many lines with the "Add Line" button as needed and provide details within the popup box for each entry. Once lines are added you can edit the details by clicking on the pencil icon.

Provide a short description or title for this procedure.

Survey

This procedure is:
Research Activity Involving Participants, Participants Data, or Biospecimens

This procedure is:
Standard of Care or Established Practice

Detailed Procedure Description
We will use Cint, a company that facilitates survey research, to implement a survey with questions about politics. Cint, like YouGov or Qualtrics, has a pool of respondents that are accustomed to survey taking for money. We will ask Cint for a nationally representative sample from their pool of participants. These individuals will then receive a link to our survey. In this survey we ask people their socio-demographics (age, gender, education, party affiliation, ideology) in order to make sure that our sample is indeed nationally representative, and then we ask them to name three politicians from the Democratic and the Republican Party. After that, we show them a list of politicians from the Democratic and Republican Party and ask them to select all the politicians they know. This is followed by three "filler" questions about male and female names that should make people forget the names of politicians they just saw. After people have answered the filler questions and their memory was cleared of the names of politicians, they are then asked to name three local or state politicians from each party. At the end of the survey, the respondents are also asked to name the top three issues or political topics they associate with each party.

Where will this procedure take place?

Procedure Location

Please add each procedure location by clicking "Add Line" and choosing an option from the dropdown. Continue clicking "Add Line" to add as many choices as needed.
Internet

Indicate the frequency and duration of visits/sessions as well as the subject's total time commitment for the study.

One survey that will take approx 15 minutes

Describe how the data will be collected (i.e. in person or online).

Online using the survey software Qualtrics

Will any video, photography, or audio be recorded as part of this procedure?

No

Will data be collected anonymously?

Yes

Will you use deception as part of this procedure?

No

Will any of these activities take place regardless of whether you are conducting the study?

No

Please indicate this procedure's current status.

Planned/Ongoing

Privacy and Confidentiality

Explain how the established data management plan along with consent processes and other elements of the research design address the following.

Privacy is considered from the perspective of the participant and is a right to be protected. Privacy refers to an individual's interest in controlling others' access to themselves. Based on their privacy interests, participants may want to control:

- The time and place where they give information
- The nature of the information they give
- Who receives and can use the information

For example, persons might not want to be seen entering a place that might stigmatize them, such as a pregnancy-counseling center identified as such by signs on the front of the building.

Describe how you will protect subject's privacy.

Individuals will not be identifiable. Dr. Sood and I, will only know the demographics (education, age, cohort, gender, rural/urban, state) and can't connect survey responses to people. We will also not be able to monitor people taking the survey. The data that we will receive from Cint is

anonymized.

Confidentiality is about data. Confidentiality pertains to protecting information from disclosure based on an agreement between the participant and the researcher. When an individual shares information in a relationship of trust and expects it to be kept private or will be disclosed only with specific permissions, researchers must uphold this agreement and maintain data appropriately.

Describe how you will maintain the confidentiality of subjects' information. If you will be using a coding system or linked list, please describe that here.

Participants will be informed that all their responses will be used for academic research so they are aware that we will analyze the data. Dr. Sood and I, only ever receive fully anonymized data without any identifying information. We will check all open-ended response boxes in the survey for any type of information that might be identifiable (sometimes people add their phone number or email!) and delete this information permanently.

Participant Population

Are you interacting or intervening with participants?

Yes

Will you use a screening procedure?

Yes

Describe any planned screening procedures. Attach your screening document(s) (e.g., health history questionnaire), if applicable at then end of the form.

People must be eligible to vote in the US. Dr. Sood and I will ask Cint to only send our link to people they know are US citizens and eligible to vote.

Please provide the total number of subjects who will be approached (including screen fails, controls and subject withdrawals) to reach enrollment numbers for the lifetime of the study for this investigator's site

1500

Please provide the total number of subjects to be *enrolled* at this site

1500

Will you be observing or recording data without interacting or intervening with participants?
No

Are you analyzing existing data records or biospecimens?
No

Inclusion and Exclusion Criteria. These should match your screening, consent, and recruitment materials exactly.

Please list all inclusion criteria
US citizens eligible to vote

Please list all exclusion criteria
Not US citizens or not eligible to vote

What is the rationale for studying the requested group(s) of participants?
Dr. Sood and I care about what people that can affect politics think about politics.

Recruitment Process

Describe the procedures for identifying and recruiting potential research subjects or requesting pre-existing data or materials.

Participant Group Descriptor

US citizens eligible to vote

Please describe the recruitment process:
We ask Cint, the provider of the respondent pool, to only share the link with people they know are US citizens and eligibel to vote.

Planned Subject Identification Methods
Other

Please describe the planned ID methods

The sruevy respondent company allows a selected recruitment from their pool of respondents.

Do you have an existing relationship with the population you wish to study?

Will a specific agency or institution provide access to prospective subjects?

Yes

Identify Agency

Cint

Planned Recruitment Materials/Methods

*(All advertising must be submitted for review in its final printed/recorded form)
Note: Attach copies of ALL recruitment materials in the attachment Section

Email

Is there any possibility that potential participants may feel coerced to participate? For example, does the researcher have a perceived or actual power over the participant group they are enrolling?

No

Is there any possibility that potential participants may feel undue influence to participate?
Note: The use of subject participation/completion incentives also potentially increases the opportunity for subject undue influence.

No

Compensation & Costs

Will participants be compensated?

Yes

Form of Compensation

Cash or Check

What is the approximate monetary value?

Dr. Sood and I don't know how much Cint will pay each respondent (and I assume that respondents are paid based on their "value" for a

representative sample). Depending on sample size we pay between $1.25 and $2 for each response to Cint. Cint then pays respondents.

Describe the remuneration plan.

Payment will be through Cint. Dr. Sood and I pay Cint a total sum that involves the sum they pay out to the participants as well as fees for the administration of the survey.

Will a 1099 be issued?

No

Will participants incur any costs to participate in this research?

No

Risks and Benefits

The IRB will determine the project risk level as part of the approval or determination. Projects determined to be minimal risk can be eligible for exemption or expedited review. Projects determined to be greater than minimal risk are reviewed by the full committee.

Minimal risk "means that the probability and magnitude of harm or discomfort anticipated in the research are not greater in and of themselves than those ordinarily encountered in daily life or during the performance of routine physical or psychological examinations or tests." [Department of Health and Human Services 45 CFR 46.102(j)]

Are there risks associated with physical well-being?

No

Are there risks associated with psychological well-being?

No

Are there risks associated with economic well-being, including employability?

No

Are there risks associated with social well-being, including reputational risks?

No

Describe how the benefits of the research justify the likely risks to participants.
There are no risks associated with the research. It is an online survey that people can take from anywhere and can stop taking at anytime.

Describe direct research benefits to the participants, if any.
There are no direct research benefits.

Describe the indirect research benefits to society.
They might feel happy about getting money, being asked some questions, or contributing to academic research?

Data Management

Data management plans, including plans for data sharing, are integral to project development. How you decide to collect, store, share and/or destroy data impacts your consent process, research procedures, data analysis, and publication.

For guidance on how to plan for the data lifecycle, reference the **resources** and tools listed here.

Data Management Services at CSU Libraries
General guidance and unfunded projects (DMPTool)
Funder-specific guidance and templates (DMPTool)

If you choose to create a standalone data management plan (DMP) for your own purposes or at the direction of a funding agency, please attach that document to your protocol, also.
A DMP fillable template is available from CSU Libraries.

Only members of the research team should have access to the data collected as part of the study or be responsible for managing access and security. If individuals will have access they should be added to the protocol people section at the top of the protocol application.

How will the data be stored and backed up during the research?
The data will first be stored on survey platform (while Dr. Sood and I use Cint for the recruitment of participants, we design the survey in Qualtrics). Once the survey is completed, Dr. Sood and I will download the anonymized data to our computers.

How will you share the data?
Standards in my discipline require that research data in published articles

is made available. I will upload anonymized data that we used for the analysis to the journal repositories.

Will identifiable data collected as part of the research be released in identifiable form? (e.g., pictures, recordings, responses to research questions, quotes)

No

Indicate below what will happen to identifiable data at the end of the study:

N/A - no coded or identifiable data is being used

What is the long-term preservation plan for the resulting dataset?

It will be uploaded to a dataverse.

Do you intend to deposit your research data/specimens into a repository for future use?

Yes

If you already have a plan, please describe. Otherwise, you can enter N/A.

Data used for publication will be made available in journal repositories (commonly the Havard Dataverse).

Consent/Assent

The informed consent process involves presenting potential research participants with the key elements of a research study and what their participation will involve before they decide whether to participate. Please visit the IRB website for templates and guidelines on what information to include.

The default process for gaining consent is to use a signed form. Knowing that this does not always make sense, the IRB can approve alterations to what information is included, waive the requirement to get a signature or waive the requirement to obtain consent altogether when the request meets specific criteria.

Follow the prompts below to describe all consent processes and provide justification for any requested alterations or waivers.

Consent

Will informed consent be obtained from all research subjects (and/or their parents or legally authorized representatives)?

Yes

Describe when the consent form will be presented to the participant and how consent will be obtained.

The consent will be the very first question in the survey. People not agreeing to the consent form will not be presented any further questions.

List each consent process by clicking "Add Line" and entering detail in the pop-up. Details can be edited by clicking the pencil icon. Add as many lines as needed.

Which participant group is this consent process for?

All

Identify how you will obtain consent by choosing from the dropdown options.

Cover Letter

Conflict of Interests

For guidance on how to answer these questions and information please visit the CSU Conflict of Interest page.

Is your Conflict of Interest (COI) disclosure with CSU up-to-date in Kuali and currently accurate?

Yes

Does the PI, immediate family member, or any other research personnel have any actual, potential or perceived conflicts of interest related to this research activity?

No

By submitting this form, you are attesting that you have read Colorado State University's policy on Conflict of Interest and agree to abide by its terms. You will update this disclosure form when new or changes in conflict of interest arise, and that you will comply with any conflict management plan required by the Institutional Review Board (IRB) to manage, reduce, or eliminate any actual or potential conflict of interest for the duration of the research.

Attachments

Attach all relevant documentation to your research in this section. Please label each item appropriately, so your IRB reviewers understand the purpose and population each document aims to address. Please delete the existing attachment and upload the Tracked Changes version and Clean revised document for review to update or revise any existing attachments.

Any documentation that a participant will see must be reviewed and approved by the IRB, including consent, recruitment, communications, tools, instruments, etc. Additional documents required for review include funding proposals, contracts, letters of agreement, methodology, related approvals, etc. For more information and guidance on what documentation to attach, please visit the IRB website.

Answers within your application indicate that the following documentation is required:

Screening Tool or Procedure: questionnaire, form, checklist, script, etc.

Obligations

The Principal Investigator is ultimately responsible for the conduct of this project. Obligations of the Principal Investigator include the following:

· Receive IRB approval or determination prior to enrolling any subjects or collecting any data intended for research use.
· Manage and maintain all research records, including consent retention, for at least three (3) years after the close of the study, or longer per sponsor requirement.
· Ensure that personnel training status remains current.
· Provide all subjects a copy of the signed consent form, when applicable.

- **Keep protocol up to date by submitting amendments for review and approval before instituting changes in any aspect of the study.**
- **Maintain current protocol approval by submitting renewals, as required.**
- **Promptly report any violations, deviations, unanticipated problems or adverse events to the IRB.**
- **Notify the IRB when the study is complete and take steps to close the protocol.**

I understand that as the Principal Investigator I am fully responsible for the execution and management of this study and that I am responsible for the performance of any sub-investigators or key personnel including their adherence to all applicable policies and regulations. I understand and agree to the obligations listed above.

I certify that I have reviewed this application, including attachments and that all information contained herein is accurate to the best of my knowledge.
